Tanaguru Contrast Finder

- Tanaguru - Opensource website assessment tool; tests websites or individual pages
- 167 tests
- Contrast Finder - Subproject of this program
- Webpage demonstration
- Demo Link: <http://contrast-finder.tanaguru.com/>

Lessons Learned

- GitHub
 - Having little to no experience with GitHub in the past, learning how to use GitHub effectively was a challenge.
- Bash
 - None of us knew much bash going in to the project, but we can all walk away with real bash experience.
- Testing Requires You to be Creative
 - Coming up with tests that accurately test the program got harder as we made more and more tests.
- Team Planning
 - While we didn't have a lot of issues with teamwork, making the time to get together to work on the project required more effort than we thought.
- Color Theory
 - We learned a lot about the study of colors and how to calculate them, such as HSL, RGB, and color distance calculation.
